**To whom it may concern:**

ConvaTec Ltd, hereby certifies that Esenta™ Sting-Free products supplied by ConvaTec are not made with natural rubber latex. All polymers used in the manufacture of our ostomy products are synthetic. Every effort is made to ensure that our products are both safe and effective. Since the FDA states that it is not aware of any tests that can verify that a product is completely free of latex proteins, a claim that a product is "latex free" is scientifically inaccurate and may be misleading. Therefore, ConvaTec has decided to stop using the label "latex-free" on Esenta™ Sting-Free products.

We further certify that any other products supplied by ConvaTec that may contain latex are clearly labeled as required by the applicable regulations.

We declare that the above information is true.

Sincerely,

Signed on behalf of Conavtec Limited
